

Lecture 6

Computer Arithmetic (Tietokonearitmetiikka)

Stallings: Ch 9

- Integer representation (Kokonaislukuesitys)
- Integer arithmetics (Kokonaislukuaritmetiikka)
- Floating-point representation (Liukulukuesitys)
- Floating-point arithmetics (Liukulukuaritmetiikka)

ALU

- ALU = Arithmetic Logic Unit (Aritmeettis-looginenyksikkö)
- Actually performs operations on data
 - Integer and floating-point arithmetic
 - Comparisons (vertailut), left and right shifts (sivuttaissiirrot)
 - Copy bits from one register to another
 - Address calculations (Osoiteaskenta): branch and jump (hypyt), memory references (muistivittaukset)
- Data from/to internal registers (latches)
 - Input copied from normal registers (or from memory)
 - Output goes to reg (or memory)
- Operation
 - Based on instruction register, control unit

(Sta06 Fig 9.1)

Computer Organization II, Spring 2009, Tiina Niklander 26.3.2009 2

Computer Organization II

Integer representation (kokonaislukujen esitys)

Computer Organization II, Spring 2009, Tiina Niklander 26.3.2009 3

Integer Representation (Kokonaislukuesitys)

- Binary representation, bit sequence, only 0 and 1
- "Weight" of the number based on position

$$\begin{aligned}
 57 &= 5*10^1 + 7*10^0 \\
 &= 32 + 16 + 8 + 1 \\
 &= 1*2^5 + 1*2^4 + 1*2^3 + 0*2^2 + 0*2^1 + 1*2^0 \\
 &= 0011\ 1001 \\
 &= 0x39 \quad \text{hexadecimal} \\
 &= 3*16^1 + 9*16^0
 \end{aligned}$$

- Most significant bit, MSB (eniten merkitsevä bitti)
- Least significant bit, LSB (vähiten merkitsevä bitti)

Computer Organization II, Spring 2009, Tiina Niklander 26.3.2009 4

Integer Representation (Kokonaislukuesitys)

- Negative numbers?
 - Sign magnitude (Etumerkki-suuruus)
 - Twos complement (2:n komplementtimuoto)
- Computers use twos complement
 - Just one zero (no +0 and -0)
 - Comparison to zero easy
 - Math is easy to implement
 - No need to consider sign
 - Subtraction becomes addition
 - Simple hardware and circuit

-57 = 1011 1001 Sign (etumerkki)
-57 = 1100 0111

+2 = 0000 0010
+1 = 0000 0001
0 = 0000 0000
-1 = 1111 1111
-2 = 1111 1110

Computer Organization II, Spring 2009, Tiina Niklander 26.3.2009 5

Twos complement (2:n komplementti)

- Example
 - 8-bit sequence, value -57

$ \begin{array}{r} 57 = 0011\ 1001 \\ 1100\ 0110 \\ 1100\ 0110 \\ \hline 0110\ 0111 \end{array} $	unsigned value (itseisarvo) invert bit (ones complement) $ \begin{array}{r} 1 \\ 1100\ 0111 \\ \hline 1100\ 0111 \end{array} $ add 1 twos complement	Reject overflow
---	--	-----------------

- Easy to expand. As a 16-bit sequence

$$\begin{array}{r}
 57 = 0011\ 1001 = 0000\ 0000\ 0011\ 1001 \\
 -57 = 1100\ 0111 = 1111\ 1111\ 1100\ 0111
 \end{array}$$

sign extension

Computer Organization II, Spring 2009, Tiina Niklander 26.3.2009 6

Twos complement

- Value range (arvoalue): $-2^{n-1} \dots 2^{n-1} - 1$

8 bits: $-2^7 \dots 2^7 - 1 = -128 \dots 127$
 32 bits: $-2^{31} \dots 2^{31} - 1 = -2\ 147\ 483\ 648 \dots 2\ 147\ 483\ 647$

- Addition overflow (yhteenlaskun ylivuoto) easy to detect
 - No overflow, if different signs in operands
 - Overflow, if same sign (etumerkki) and the results sign differs from the operands

$$\begin{array}{r} 57 = 0011\ 1001 \\ + 80 = 0101\ 0000 \\ \hline 137 = 1000\ 1001 \end{array}$$

Overflow!

Computer Organization II, Spring 2009, Tiina Niklander

26.3.2009

7

Twos complement

- Subtraction as addition (vähennyslasku yhteenlaskuna)!
- Forget the sign, handle as if unsigned!
- Complement 2nd term, subtrahend ($2:n$ komplementti vähentääjästä) then add
- Simple hardware

-3 in two complement

- Check
 - Overflow? (same rule as in addition)
 - sign=1, result is negative

(Sta06 Table 9.1)

Computer Organization II, Spring 2009, Tiina Niklander

26.3.2009

8

Computer Organization II

Integer arithmetics (kokonaislukuaritmetiikka)

- Negation (negaatio)
- Addition (yhteenlasku)
- Subtraction (vähennyslasku)
- Multiplication (kertolasku)
- Division (jakolasku)

Computer Organization II, Spring 2009, Tiina Niklander

26.3.2009

9

Negation = Twos complement

- 1: invert all bits
- 2: add 1
- 3: Special cases
 - Ignore carry bit (ylivuotobitti)
 - Sign really changed?
 - Cannot negate smallest negative
 - Result in exception

-128 = 1000 0000

$$\begin{array}{r} 0111\ 1111 \\ + 1 \\ \hline 1000\ 0000 \end{array}$$

- Simple hardware

$$\begin{array}{r} -57 = 1100\ 0111 \\ 0011\ 1000 \\ \hline 0011\ 1001 \\ = 57 \end{array}$$

Computer Organization II, Spring 2009, Tiina Niklander

26.3.2009

10

Addition (and subtraction)

- Normal binary addition
 - In subtraction: complement the 2. operand, subtrahend (vähentääjä) and add to 1. operand, minuend (vähennettävä)
- Ignore carry
 - Check sign!
 - Overflow indication
- Simple hardware function
 - Two circuits:
 - Complement and addition

Overflow: $1100 = -4$, $+100 = -4$, $+1111 = -1$, $+1011 = -5$, $+1011 = ?$

(Sta06 Fig 9.6)

Computer Organization II, Spring 2009, Tiina Niklander

26.3.2009

11

Integer multiplication

- "Just like" you learned at school
 - Easy with just 0 and 1!
- Hardware?
 - Complex
 - Several algorithms
- Overflow?
 - 32 b operands \rightarrow result 64 b?
- Simpler, if only unsigned numbers
 - Just multiple additions
 - Or additions and shifts
 - Shift left = multiply by 2
 - esim: $5 * 11 = 2 * 10011 + 10110$

Multiplicand (11) Multiplier (13)

1011	}	Partial products
$\times 1101$		
1011		
0000		

Product (143)

(Sta06 Fig 9.7)

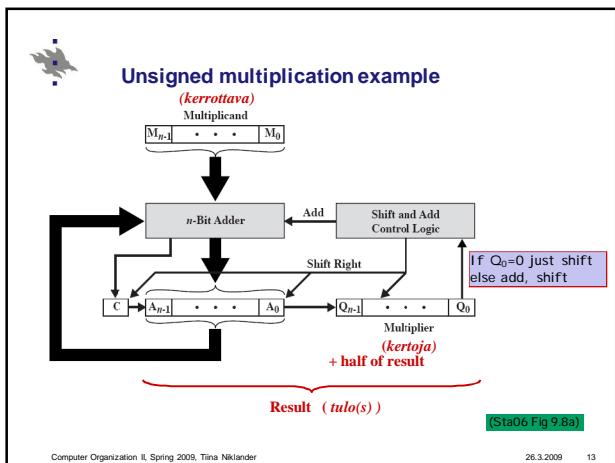

Example: $5 * 11 = 2 * 10011 + 10110$

shift=> 10110
shift=> 10110
add=> 110111 (= 55)

Computer Organization II, Spring 2009, Tiina Niklander

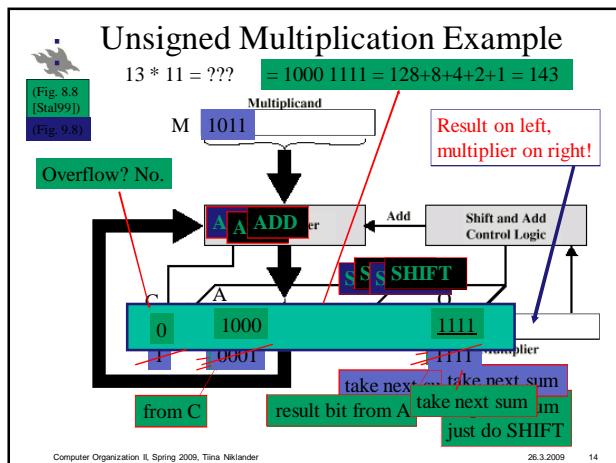

26.3.2009

12

Computer Organization II, Spring 2009, Tiina Niklander

26.3.2009 13

Computer Organization II, Spring 2009, Tiina Niklander

26.3.2009 14

Unsigned multiplication

$Q * M = 1101 * 1011 = 1000\ 1111$ eli $13 * 11 = 143$

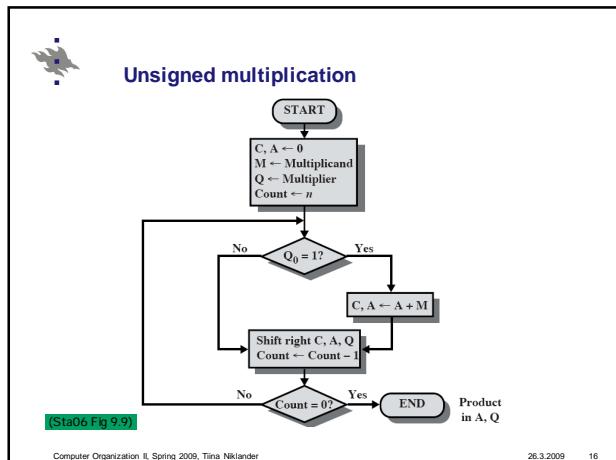

C	A	Q	M	
0	0000	1101	1011	Initial Values
0	1011	1101	1011	Add } First
0	0101	1110	1011	Shift } Cycle
0	0010	1111	1011	Shift } Second
0	1101	1111	1011	Add } Third
0	0110	1111	1011	Shift } Cycle
1	0001	1111	1011	Add } Fourth
0	1000	1111	1011	Shift } Cycle

(b) Example from Figure 9.7 (product in A, Q)

(Sta06 Fig 9.8b)

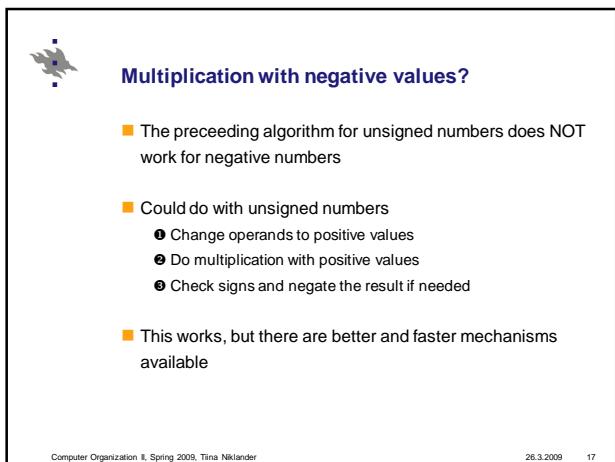

Computer Organization II, Spring 2009, Tiina Niklander

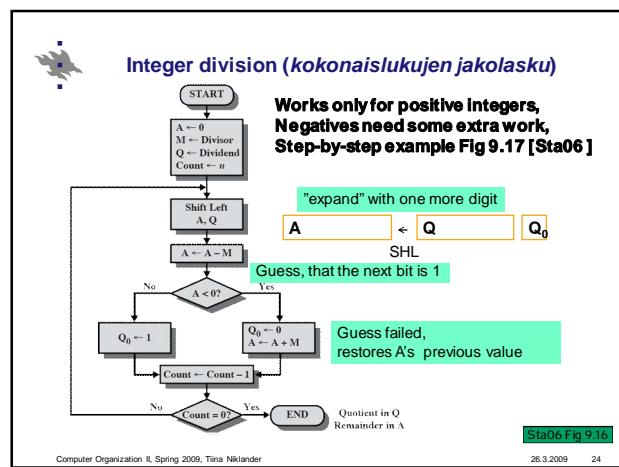

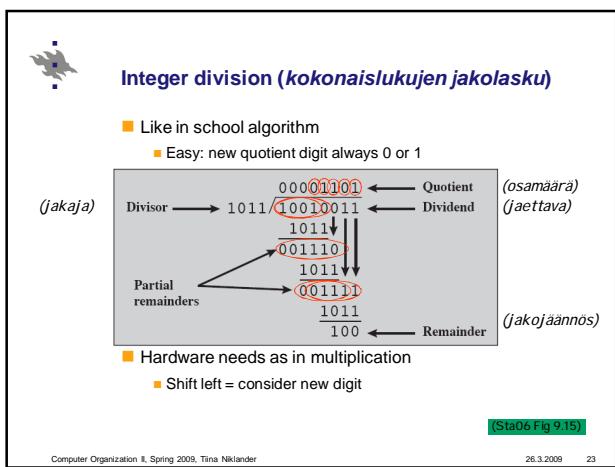

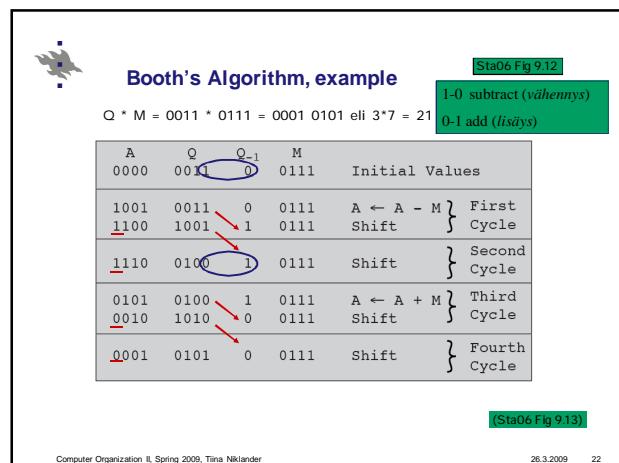

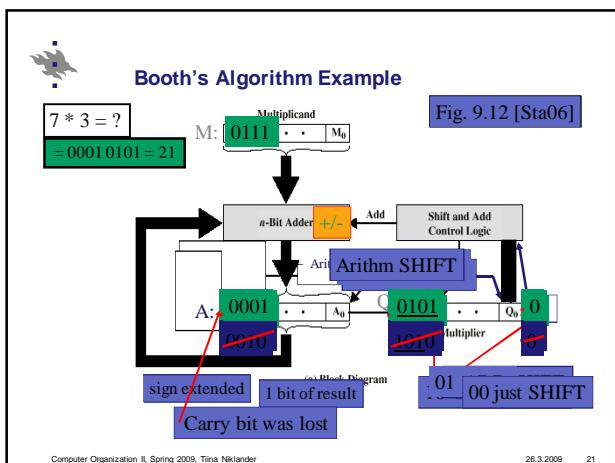

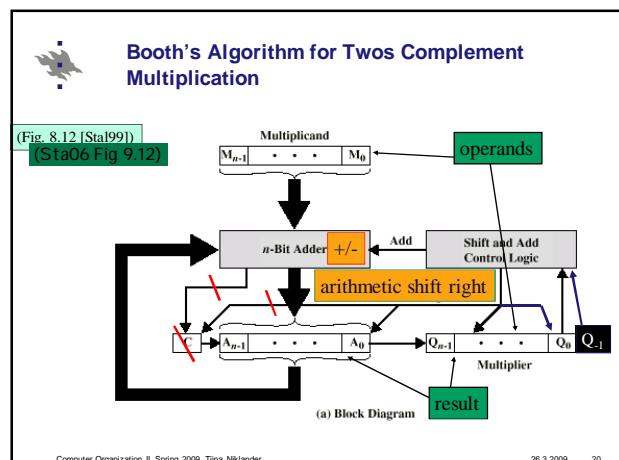

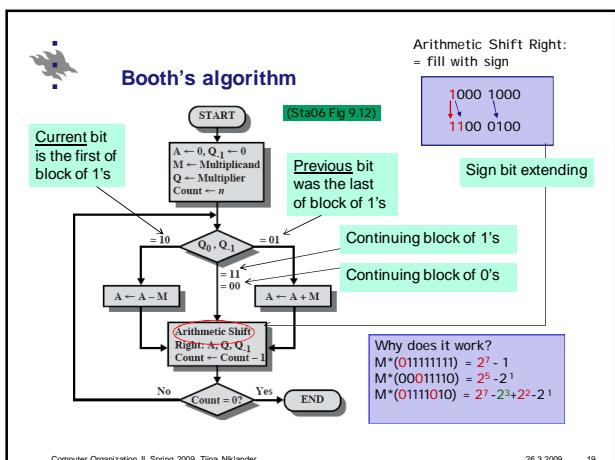

26.3.2009 15

Computer Organization II, Spring 2009, Tiina Niklander

26.3.2009 16

Example: two's complement division

■ Division: 7/3 A+ Q = 7 = 0000 0111 M= 3 = 0011

A	Q
0000	0111 initial value
0000	1110 shift left
0101	1110 subtract M
0000	1110 restore
0001	1100 shift left
1110	1100 subtract M
0001	1100 restore
0011	1000 shift left
0000	1000 subtract M
0000	1001 set $Q_0=1$
0001	0010 shift
1110	1110 subtract M
0001	0010 restore

Sta06 Fig 9.17 a

Subtract M = Add (-M)
 $-M = -3 = 1101$

First try, if you can do the subtraction (or add if different signs). If the sign changed, subtraction failed and A must be restored, $Q_0 = 0$

If subtraction successful, $Q_0 = 1$

$Q = \text{quotient} = 2$
 $A = \text{remainder} = 1$

Repeat as many times as Q has bits.

Computer Organization II, Spring 2009, Tiina Niklander 26.3.2009 25

Computer Organization II

Floating Point Representation (Liukulukunesitys)

Computer Organization II, Spring 2009, Tiina Niklander 26.3.2009 26

Floating Point Representation

■ Significant digits (*Merkitsevät numerot*) and exponent (*suuruusluokka*)
 ■ Normalized number (*Normeerattu muoto*)
 ■ Most significant digit is nonzero >0
 ■ Commonly just one digit before the radix point (*desim. pilkku*)

$-0.000\ 000\ 000\ 123 = -1.23 * 10^{-10}$
 $0.123 = +1.23 * 10^1$
 $123.0 = +1.23 * 10^2$
 $123\ 000\ 000\ 000\ 000 = +1.23 * 10^{14}$

Computer Organization II, Spring 2009, Tiina Niklander 26.3.2009 27

IEEE 754 (floating point) formats

Parameter	Single	Single Extended	Double	Double Extended
Word width (bits)	32	≥ 43	64	≥ 79
Exponent width (bits)	8	≥ 11	11	≥ 15
Exponent bias	127	unspecified	1023	unspecified
Maximum exponent	127	≥ 1023	1023	≥ 16383
Minimum exponent	-126	≤ -1022	-1022	≤ -16382
Number range (base 10)	$10^{-38}, 10^{+38}$	unspecified	$10^{-308}, 10^{+308}$	unspecified
Significand width (bits)*	23	≥ 31	52	≥ 63
Number of exponents	254	unspecified	2046	unspecified
Number of fractions	2^{23}	unspecified	2^{52}	unspecified
Number of values	1.98×2^{31}	unspecified	1.99×2^{63}	unspecified

* not including implied bit

(Sta06 Table 9.3)

Computer Organization II, Spring 2009, Tiina Niklander 26.3.2009 28

32-bit floating point

- 1 b sign
 ■ 1 = "-", 0 = "+"
- 8 b exponent
 ■ Biased representation, no sign (*Ei etumerkkiä, vaan erillinen nollataso*)
 - Exp=5 → store 127+5, Exp=-5 → store 127-5 (bias127)
- 23 b significant (*mantissa*)
 - In normalized form the radix point is preceded with 1, which is not stored. (hidden bit, Zuse Z3 1939)
- The binary value of the floating point representation
 $-1\text{Sign} * 1.\text{Mantissa} * 2^{\text{Exponent}-127}$

Computer Organization II, Spring 2009, Tiina Niklander 26.3.2009 29

Example

$23.0 = +10111.0 * 2^0 = +1.0111 * 2^4 = ?$
 $127+4=131$

0	1000 0011	011 1000 0000 0000 0000 0000
sign	exponent	mantissa

$1.0 = +1.0000 * 2^0 = ?$
 $0+127=127$

0	0111 1111	000 0000 0000 0000 0000 0000
sign	exponent	mantissa

Computer Organization II, Spring 2009, Tiina Niklander 26.3.2009 30

Example

0	1000 0000	111 1000 0000 0000 0000 0000
---	-----------	------------------------------

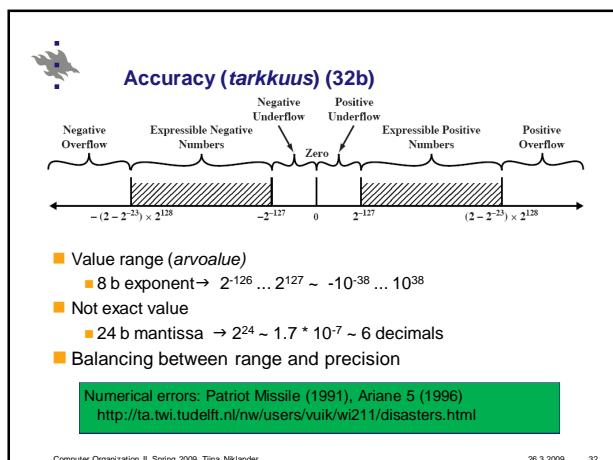

sign exponent mantissa

$X = ?$

$$\begin{aligned} X &= (-1)^0 * 1.1111 * 2^{(128-127)} \\ &= 1.1111_2 * 2 \\ &= (1 + 1/2 + 1/4 + 1/8 + 1/16) * 2 \\ &= (1 + 0.5 + 0.25 + 0.125 + 0.0625) * 2 \\ &= 1.9375 * 2 \quad = 3.875 \end{aligned}$$

Computer Organization II, Spring 2009, Tiina Niklander

26.3.2009 31

Computer Organization II, Spring 2009, Tiina Niklander

26.3.2009 32

Interpretation of IEEE 754 Floating-Point Numbers

Single Precision (32 bits)			
Sign	Biased exponent	Fraction	Value
positive zero	0	0	0
negative zero	1	0	-0
plus infinity	0	255 (all 1s)	∞
minus infinity	1	255 (all 1s)	$-\infty$
quiet NaN	0 or 1	255 (all 1s)	$\neq 0$
signaling NaN	0 or 1	255 (all 1s)	$\neq 0$
positive normalized nonzero	0	$0 < e < 255$	$2^{e-127}(1.f)$
negative normalized nonzero	1	$0 < e < 255$	$-2^{e-127}(1.f)$
positive denormalized	0	0	$2^{e-126}(0.f)$
negative denormalized	1	0	$-2^{e-126}(0.f)$

Not a Number

Double Precision similarly

(Sta06 Table 9.4)

Computer Organization II, Spring 2009, Tiina Niklander

26.3.2009 33

NaN: Not a Number

Operation	Quiet NaN Produced by
Any	Any operation on a signaling NaN
	Magnitude subtraction of infinities: $(+\infty) + (-\infty)$ $(-\infty) + (+\infty)$ $(+\infty) - (+\infty)$ $(-\infty) - (-\infty)$
Add or subtract	
Multiply	$0 \times \infty$
Division	$\frac{0}{0}$ or $\frac{\infty}{\infty}$
Remainder	$x \text{ REM } 0$ or $0 \text{ REM } y$
Square root	\sqrt{x} where $x < 0$

(Sta06 Table 9.6)

Computer Organization II, Spring 2009, Tiina Niklander

26.3.2009 34

Computer Organization II

Floating Point Arithmetics (Liukulukuaritmetiikka)

- IEEE-754 Standard
- Addition
- Subtraction
- Multiplication
- Division

Computer Organization II, Spring 2009, Tiina Niklander

26.3.2009 35

- Floating point arithmetics**
- Calculations need wide registers
 - Guard bits - pad right end of significand
 - More bits for the significand (mantissa)
 - Using Denormalized formats
 - Addition and subtraction
 - More complex than multiplication
 - Operands must have same exponent
 - Denormalize the smaller operand (alignment!)
 - Loss of digits (less precise and missing information)
 - Result (must) be normalised
 - Multiplication and division
 - Significand and exponent handled separately

Computer Organization II, Spring 2009, Tiina Niklander

26.3.2009 36

Floating point arithmetics

Floating Point Numbers	Arithmetic Operations
$X = X_s \times B^{Y_E}$ $Y = Y_s \times B^{Y_E}$	$X + Y = \left(X_s \times B^{Y_E - Y_E} + Y_s \right) \times B^{Y_E}$ $X - Y = \left(X_s \times B^{Y_E - Y_E} - Y_s \right) \times B^{Y_E}$ $X \times Y = (X_s \times Y_s) \times B^{X_E + Y_E}$ $\frac{X}{Y} = \left(\frac{X_s}{Y_s} \right) \times B^{X_E - Y_E}$

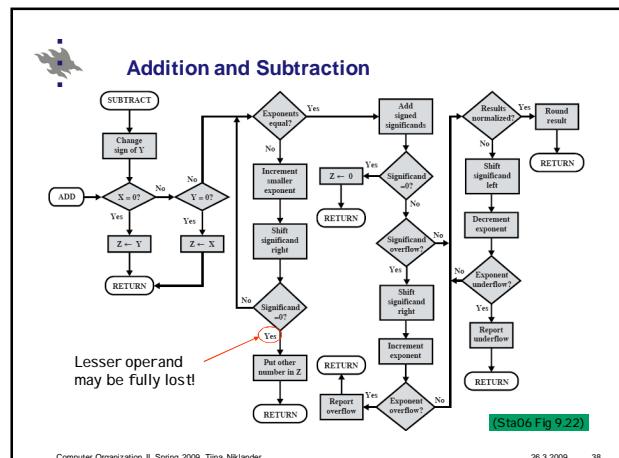

$X = 0.3 \times 10^2 = 30$
 $Y = 0.2 \times 10^3 = 200$

$X + Y = (0.3 \times 10^{-3}) + 0.2 \times 10^3 = 0.23 \times 10^3 = 230$
 $X - Y = (0.3 \times 10^{-3}) - 0.2 \times 10^3 = (-0.17) \times 10^3 = -170$
 $X \times Y = (0.3 \times 0.2) \times 10^{2+3} = 0.06 \times 10^5 = 6000$
 $X / Y = (0.3 / 0.2) \times 10^{2-3} = 1.5 \times 10^{-1} = 0.15$

(Sta06 Table 9.5)

Computer Organization II, Spring 2009, Tiina Niklander

26.3.2009 37

Computer Organization II, Spring 2009, Tiina Niklander

26.3.2009 38

Special cases

- Exponent overflow (eksponentin ylivouto)
 - Very large number (above max) Programmable option
 - Value ∞ or $-\infty$, alternatively cause exception
- Exponent underflow (eksponentin alivouto)
 - Very small number (below min) Programmable option
 - Value 0 (or cause exception)
- Significand overflow (mantissan ylivouto)
 - Normalise!
 - Fix it!
- Significand underflow (mantissan alivouto)
 - Denormalizing may lose the significand accuracy
 - All significant bits lost? Ooops, lost data!

Computer Organization II, Spring 2009, Tiina Niklander

26.3.2009 39

Rounding (pyöristys)

- Example

3.1234, -4.5678

 - Value has four decimals
 - Present it using only 3 decimals
- Normal rounding rule
 - round to nearest value
 - Always towards ∞ (ylöspäin)
 - Always towards $-\infty$ (alaspäin)
 - Always towards 0

3.123, -4.568

- For example, Intel Itanium supports all of these alternatives

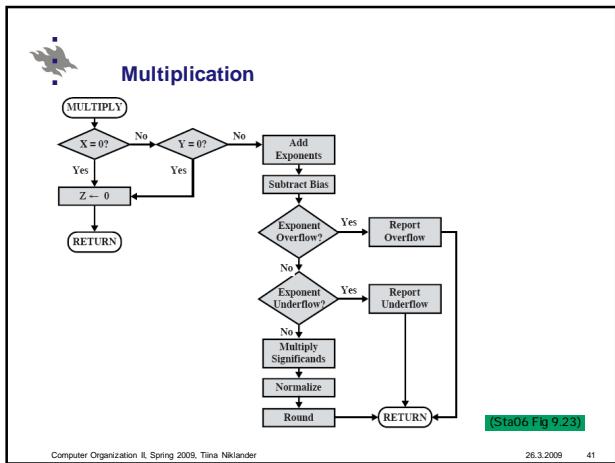

3.124, -4.567

3.123, -4.568

3.123, -4.567

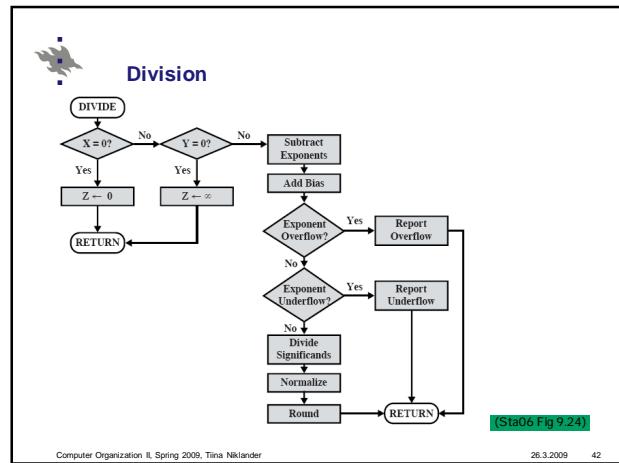

Computer Organization II, Spring 2009, Tiina Niklander

26.3.2009 40

Computer Organization II, Spring 2009, Tiina Niklander

26.3.2009 41

Computer Organization II, Spring 2009, Tiina Niklander

26.3.2009 42

Review Questions / Kertauskysymyksiä

- Why we use twos complement?
- How does twos complement "expand" to a large number of bits (8b → 16 b)?
- Format of single-precision floating point number?
- When does underflow happen?

- Miksi käytetään 2:n komplementtimuotoa?
- Miten 2:n komplementtiesitys laajenee "suurempaan tilaan" (esim. 8b esitys → 16 b:n esitys)?
- Millainen on yksinkertaisen tarkkuuden liukuluvun esitysmuoto?
- Milloin tulee liukuluvun alivuoto?
